

KN95, N95, & 3 Layer Masks

Quality is controlled by American QC teams in China at the factory

American Quality Control in China

In manufacturing, particularly when sourcing and bringing product in from China...**you get what you inspect, not what you expect.** During the current COVID-19 pandemic a lot of fake masks and other PPE product is being quickly sourced and shipped to the USA. Much of this fake product ends up getting destroyed with dollars lost and time lost. All while lives are on the line. JGI is tackling fake and poor quality COVID-19 face masks head-on by using our American quality control teams on the ground in China to verify quality at the source.

The best way to effectively and consistently control product quality from China is to be in the factory to run your own quality control independent from the quality control program the factory offers you. Then verify your own QC findings with a qualified testing lab.

We do this and more with American quality control teams embedded in the factory to manage quality control on a lot by lot basis before following up with independent testing labs. We verify at the source and make sure on quality before we ship your KN95 mask, N95 masks or 3-Layer masks to you.
